

# 2022 ADOPT-A-NET SPONSOR CREAMER'S FIELD MIGRATION STATION

## NET 30: ARCTIC AUDUBON SOCIETY

Net 30 caught 69 birds of 14 species in 2022. Swainson's Thrushes were the most common species at this net, with 23 captures.

This net caught several Gray-cheeked Thrushes, which are one of the farthest-traveling migrants through CFMS. From their breeding sites in taiga forest and shrub thickets in Alaska, Gray-cheeked Thrushes migrate all the way to the lowland rainforests of South America for the winter!
