

2023 ADOPT-A-NET SPONSOR CREAMER'S FIELD MIGRATION STATION

NET 28: ARCTIC AUDUBON SOCIETY

Net 28 caught 56 birds of 15 species in 2023. Dark-eyed Juncos were the most common species at this net, with 12 captures.

One highlight bird from this net was a Varied Thrush. This species breeds in coniferous forests and are known for their simple yet echoing songs. Most winter along the Pacific coast of the lower 48, but some can be found throughout the winter in southern coastal Alaska.
